

Memory-Map software will enable your business to:

1. Find Locations

Save time by quickly searching for a location whether it is a town, village, street or grid reference.

2. Build Overlays

Customise your map by adding your own routes, tracks, marks, text and icons. This will make the map more relevant to your business use.

3. Custom printing

Print only the map area you require saving money and time.

4. GPS Integration

If you need a precise fix of a location or asset then Memory-Map linked with a GPS receiver can give you this whether on a PC, Laptop or PDA.

5. PDA Use

Make your mapping mobile and increase the flexibility with which you use it. Link with a GPS for a real time position on the map.

6. Mobile Phone Use

Memory-Map can now be used on some Smartphones.
(windows operating system needed)

7. Command and Control

Memory-Map can play a key role in the work of emergency services and health professionals. Bringing just a few of the key features to bear will aid command and control, contingency planning and incident response.

8. Tracking

Monitor the position and progress of business assets on a familiar map format.
